

# Joint CQSE and CASTS Seminar

Weekly Seminar  
May 31, 2013 (Friday)

TIME May 31, 14:30 ~ 15:30  
TITLE Kibble-Zurek scaling and its breakdown for spontaneous generation of Josephson vortices in Bose-Einstein condensates  
SPEAKER Prof. Shih-Chuan Gou  
Department of Physics, National Changhua University of Education  
PLACE Rm716, CCMS & New Physics Building, NTU

## Abstract

Atomic Bose-Einstein condensates conned to a dual-ring trap support Josephson vortices as topologically stable defects in the relative phase. We propose a test of the scaling laws for defect formation by quenching a Bose gas to degeneracy in this geometry. Stochastic Gross-Pitaevskii simulations reveal a  $-1/4$  power-law scaling of defect number with quench time for fast quenches, consistent with the Kibble-Zurek mechanism. Slow quenches show stronger quench-time dependence that is explained by the stability properties of Josephson vortices, revealing the boundary of the Kibble-Zurek regime. Interference of the two atomic elds enables clear long-time measurement of stable defects, and a direct test of the Kibble-Zurek mechanism in Bose-Einstein condensation.
